Hi Mike, reading these results can be kind of confusing. We started off with 6 PWS (3 in OH and 3 in WV) and 10 private wells (5 in OH and 5 in WV), however we then added some more Ohio private wells in the second round of sampling because the HFPO-DA results were higher in Ohio, then for the third round of sampling we only had Chemours sample those systems/private wells that had detectable levels of HFPO-DA. The Washington Works PWS should be comprehensive with their biweekly sampling. Please let me know if any of this doesn't make any sense!

Kevin
